

Tyler Momani

Full Stack & AI Developer | Python · JavaScript · TensorFlow

(949)-910-7646 | TylerMomani@gmail.com | linkedin.com/in/Tyler-momani | github.com/Tmomani11

SUMMARY

Full stack and AI developer with experience building, deploying, and teaching AI-powered solutions across client projects, educational settings, and team environments. Led end-to-end development of machine learning applications, workflow automations, and cloud-hosted tools while mentoring students and translating technical concepts for diverse audiences. Interested in applying AI to solve operational and community-impact challenges at scale.

EDUCATION

Chapman University

Bachelor of Science in Computer Science

Orange, CA

Dec 2025

TECHNICAL SKILLS

ML & AI: TensorFlow, PyTorch, NLP, Model Fine-Tuning, OpenCV

Languages: Python, JavaScript, TypeScript, Java, C++, SQL

Frameworks & Tools: Flask, React.js, MySQL, REST APIs, AWS, Docker, Git/GitHub

Practices: OOP, Agile/Scrum, CI/CD, Unit & Integration Testing

EXPERIENCE

Freelance Software Developer

Jan 2026 – Present

Self-employed

Orange County, CA

- Worked directly with small business owners to identify operational needs, scope AI-powered solutions, and deploy production-ready NLP assistants serving ~100 daily visitors
- Delivered full project lifecycle across 3 client engagements, including discovery, requirements gathering, model training, frontend development, deployment, documentation, and client handoff.
- Fine-tuned and deployed NLP models using TensorFlow and PyTorch on business-specific FAQ and historical support datasets.

AI Fitness Platform (LA Hacks 2025 – 3rd Place)

Apr 2025

Hackathon – Team Lead (3 members)

Los Angeles, CA

- Led a 3-person team over 48 hours to design and build an AI-powered fitness platform that analyzes body structure, shoulder width, and body fat percentage to generate personalized workout materials
- Engineered two neural networks: one using OpenCV for real-time body analysis and one leveraging Google Gemini AI for personalized content generation
- Built the full project in Python using Reflex as both the frontend and backend framework, delivering a working product end-to-end within the hackathon window

Student Mentor – Computer Science

Aug 2024 – Dec 2025

Chapman University

Orange, CA

- Mentored ~10 students weekly (50+ total) in data structures, algorithms, OOP, and software engineering concepts, improving exam performance by up to 30%
- Collaborated with students and instructors to identify technical gaps, troubleshoot issues, and communicate complex technical concepts clearly in team-oriented environments
- Supported 10+ students in internship preparation through resume reviews, mock technical interviews, and software development guidance

Class Teacher Assistant and Lab Aide

Aug 2021 – May 2023

Saddleback College

Mission Viejo, CA

- Tutored 50+ students in Java, Python, and C++, designed and graded programming assignments for classes of 30+, and supported instructors with technical troubleshooting and classroom coordination

PROJECTS

Veyra Fulfillment OS | Frontend · Systems | JavaScript, HTML/CSS | [Live Demo](#)

May 2026

- Built a warehouse route optimization system that reduced worker travel distance by automatically sequencing and routing multi-stop pick operations.
- Modeled a real WMS receiving workflow where a barcode scan triggers duplicate detection, auto-SKU generation, and branches into new intake, stock-in, or quality hold – keeping business logic cleanly separated across 10 single-responsibility JS modules
- Enforced role-based access across owner, manager, and worker tiers using JWT-style tokens and 8 granular permission scopes, so each role sees only the controls relevant to their warehouse function

RideShare Platform | Backend · Cloud | Python, Flask, MySQL, REST API, AWS

Dec 2025

- Designed a scalable relational database schema for an Uber-style rideshare system with users, drivers, rides, and payments, enforcing referential integrity through foreign key constraints
- Built and deployed a cloud-hosted Flask REST API backend exposing ride matching, fare calculation, and trip history endpoints with modular, maintainable architecture
- Implemented advanced SQL query patterns including multi-table JOINS, subqueries, and stored procedures to support reporting, analytics, and backend application workflows

Discord Restaurant Management Bot | Backend · API | Python, MySQL, REST API

Oct 2025

- Built a full stack ordering and workflow automation system supporting 10+ concurrent users, with a clean API layer separating business logic from MySQL-backed persistence
- Designed real-time slash-command workflows and order state management features with maintainable architecture and CSV-based reporting for operational analytics
